

Press Release

Wadsworth, OH (10/27/08) ATV Four Play is proud to announce our newest product for the ATV industry.

ATV Four Play's **SOFT BARS**. After several months of testing on mini quads, we believe that we have constructed a means that greatly reduces the harsh impacts on youth rider's upper body commonly associated with ATV riding.

The idea was to design a handle bar assembly specific for ATV use. We also wanted an assembly that would conform to the rider's ever changing body position.

Normally the youth rider's arms, wrists and upper body's are not fully developed to handle these impacts. With our system the handle end pivots with the sweep of the handlebars. This concept allows the dampening system to perform inline with the riders' posture.

Our **SOFT BARS** use a (PDS) Progressive Dampening System. *This system uses a dual rate vertical cartridge installed in the upright pivot assembly.* This fully adjustable system allows for light resistance at the beginning of the travel continuing to a heavier resistance at the end of travel.

ATV Four Play's **SOFT BARS** will initially be offered in (4) four different variations specific to mini quad/youth riders needs.

Suggested Retail is \$ 281.25
